

Aquatec Aquajet Series pumps

Based on the Aquatec patented variable speed technology, the Aquajet RV and ES series pumps offer “just like home” water systems to mobile home users.

Typical Applications

- + Recreational vehicles, caravans, camper vans
- + Boats and yachts
- + Water recirculation systems
- + Waste water systems
- + Drinking water delivery
- + Pressure boosting

Functional Highlights

Smooth flows without rapid cycling – Aquatec’s patented variable speed controllers, now improved with additional “smart” features, eliminate all rapid cycling within normal flow ranges. The 5-chamber construction, along with the patented screwless diaphragm, minimises pulsation found in other pumps.

Automatic adjustment for easier installation – Improved electronic controls allow the Aquajet Series to adjust automatically, insuring proper operation regardless of plumbing and/or electrical system design. The latest Aquajet Series also incorporates a universal mounting option, making retrofits even easier.

Improved safety features – The latest Aquajet Series includes valuable additional safety features, including low voltage protection (protecting the pump from weakened battery power conditions) and a maximum pressure bypass (protecting the vehicle or vessel’s plumbing system from excess pressurisation).

Greater flows at higher pressures – Aquatec’s patented 5 chamber design continues to deliver the strongest flow rates and highest pressures available, even with multiple fixtures operating at the same time.

Virtually silent operation – This is accomplished through slower motor speeds and superior hydraulic energy transmission.
