

• aquaQUELL • 06-BC

Even the best drinking water can contain a high proportion of carbonate hardness. The result: limescale deposits in coffee machines cause failures and increase service and operating costs.

Your advantages with BRITA AquaQuell 06-BC:

- + Low investment and reduced service costs
- + Easy filter exchange – simply by the user
- + Use in existing installations also possible
- + Compact dimensions
- + Can be used horizontally or vertically

The advantages for coffee connoisseurs:

- + Best coffee aroma
- + Constantly high coffee quality

AquaQuell Technology

Specifically reduces the carbonate hardness in the water, preventing scale deposits. Unwanted smells and flavours, chlorine and heavy metals that impair the aroma and the attractiveness of food and drink are removed. Furthermore, the filter in the water safely retains any coarse and fine particles.

Technical Specifications

AquaQuell 06-EC is the same filter, but designed to fit an Everpure®* filter head.

	AquaQuell 06-BC
Total system height (incl. wall mounting)	455 mm
Height for filter change (ap-	485 mm
Filter head width (including connecting thread without hoses)	114 mm
Depth	91 mm
Maximum operating pressure	8 bar (116 psi)

Operating temperature	4°C - 30°C
Typical usage period ¹	420 litres at 10 °KH, or 6 months

Certified BRITA quality

Filter cartridges inspected for burst pressure by TÜV Product Service.

The food quality of BRITA water filter products has been inspected and confirmed by an independent institute.

¹ The specified capacity is intended as a guideline only and may vary depending on the product volume flow and machine type.
