

Fluid-o-Tech MGC AC series

The magnet drive principle provides a totally sealed pump chamber which is capable of handling a wide range of corrosive liquids with a high degree of safety. The pump housing is available in AISI 316L, SAF 2205 or AISI 303. The gears are available in PTFE or Peek™.

The MGC AC series combines the MG 200 series pump head with either a single phase (MGC3) or three phase (MGC7) AC motor unit. In operation the MG200 Series pumps are quiet, pulsation-free and capable of handling relatively high temperature liquids. The pump housing is available in AISI 316L, SAF 2205 or AISI 303. The gears are available in PTFE or Peek™.

The coupling with the MGC3 and MGC7 AC units is designed for heavy duty, and provides reliable and quiet operation in a compact size. The pole-to-pole alignment of the two magnets provides the driving motion to the pump. Decoupling will occur when the pump load exceeds the coupling torque between the magnets.

- + 1/8" NPT or GAS ports
- + Relief valve available upon request
- + NSF listed pumps for potable water

Main Applications

- | | |
|--|--|
| <ul style="list-style-type: none"> + Medical and surgical equipment + Hemodialysis apparatus + Laser apparatus + Lubrication + Ink-jet printing systems | <ul style="list-style-type: none"> + Cooling systems + Laboratory instrumentation + Sampling + Food processing equipment |
|--|--|

Technical Information

Composition / materials			Technical information	
Housing	Gear	Seal	Temp range	Max pressure
316 L SS	PTFE	PTFE	45 to +50°C / -49 to +122°F	20 bar / 290 psi
316 L SS	Peek™	PTFE	45 to +120°C / -49 to +248°F	20 bar / 290 psi
